

Changing pallets
now easier than ever!

Clever, efficient
and extremely
cost-effective

Slide in, push out, finished!

Thanks to the innovative pallet sliding device PSV, changing pallets is now easier than ever.

Special advantage:

The whole process can be carried out by one person without much effort.

Special ADVANTAGES of the PSV

- Ready to use immediately
- Choice of models
EURO, INDUSTRY, CUSTOM
- Pallet changing can be carried out quickly, safely and easily
- Only one person necessary for operation
- Operating staff can be trained in a few simple steps
- Innovative changing system without elaborate hydraulics or energy-consuming motors
- Flexible positioning with bolts to a level floor
- Robust 4 mm sheet steel with constructive reinforcements
- Strong, solidly welded ramming protection
- Long-term use on a daily basis

PSV – PALLET SLIDING DEVICE

Change in seconds

For the exchange maneuver, the loaded pallet is placed in the changing station PSV. The side walls, angled slightly outward, guide the pallet and its load into an ideal position. With a forklift, the new, empty pallet is placed directly in front of the unwanted one. By simply pushing forward, the exchange takes place almost by itself:

While the back and side walls hold the loaded goods gently, the new pallet slides under the cargo and pushes its predecessor through the opening in the back wall. The whole operation is carried out without any unwanted pressure on the goods and is taken care of in seconds.

The PLUS version has polyamide rails beveled on both ends to raise the installed pallet in such a way that flat pallets can be exchanged for higher ones (as with one-way/EURO). Available in the models EURO (800 mm width), INDUSTRY (1000 mm width) as well as CUSTOM (with customer-specific measurements).

► **Optional**
version in stainless steel for hygienically sensitive areas and food production.

Cost-effective solution for transport, trade and industry

With the innovative pallet sliding device PSV by SW-Paratus, changing pallets in transport, trade and industry can now be accomplished in seconds: Whether it's changing from wooden to plastic or metal pallets, one-way pallets to Euro-pallets or when wrong measurements, defects or contamination make further use of pallets impossible.

Flexible positioning

The pallet sliding device is ready to use immediately and is anchored to a level floor (concrete, industrial floor, screed floor, etc.) with bolts. Robust 4 mm sheet steel and a number of constructive reinforcements guarantee long-term use on a daily basis.

Collect and stack securely

The pallet stacking station PSS creates perfect order in the packaging area:

On minimal space, pallets can be stored according to their size and use as well as stacking the replaced ones securely after the exchange. The PSS is the ideal partner to the changing station and is also produced in the formats EURO, INDUSTRY as well as CUSTOM.

- ▶ Optionally models are also available in stainless steel.
